

▶ **Process: Cutting material of frame and doors**

Equipment: double end saw / angle saw / cutting machine

Consumables: diamond saw blade, alloy saw blade, end milling cutter

▶ **Process: Assembly hardware accessories**

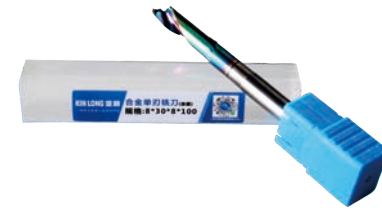

Equipment: small electric drill / Air screw driver

Consumables: screwdriver head, small electric drill

▶ **Process: Milling slot**

Equipment: automatic / semi-automatic milling machine

Consumables: single-edged milling cutter, double-edged milling cutter, sink milling cutter

▶ **Process: Drilling profile holes**

Equipment: automatic / semi-automatic drilling machine

Consumables: twist drill

Saw blade series

Germany 75cr1 plate, wear-resistant, good dynamic balance, long service life

Diamond saw blade

Advantages of PCD saw blades: The single service life is 10-20 times that of conventional cemented carbide, which effectively reduces the number of saw blade replacements and ensures production continuity. For some materials that are easily worn by conventional saw blades, such as silicon aluminum alloy, which has a very high cost performance.

Alloy saw blade

Features: smooth and flat cutting surface, not easy to burr, long service life.

Applicable equipment: single and double head positive (oblique) cutting saw and hand pressure saw.

Cutting materials: plastic steel, aluminum alloy profile, aluminum alloy radiator, aluminum alloy doors and windows, copper alloy and other non-ferrous metals.

This product can be customized according to the customer's drawings

Milling cutter series

Multi material, high hardness, efficient milling, long service life

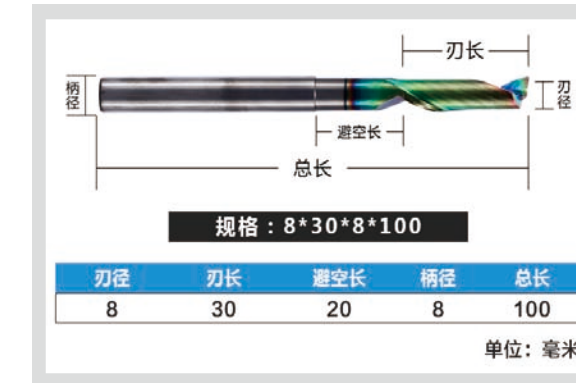

Alloy coated milling cutter

Alloy coating material, hardness: 91.5°~92.5°

Workpiece thickness: 3~5mm, machine speed above 12000rpm

Applicable to fully automatic CNC machine tools

High speed steel milling cutter

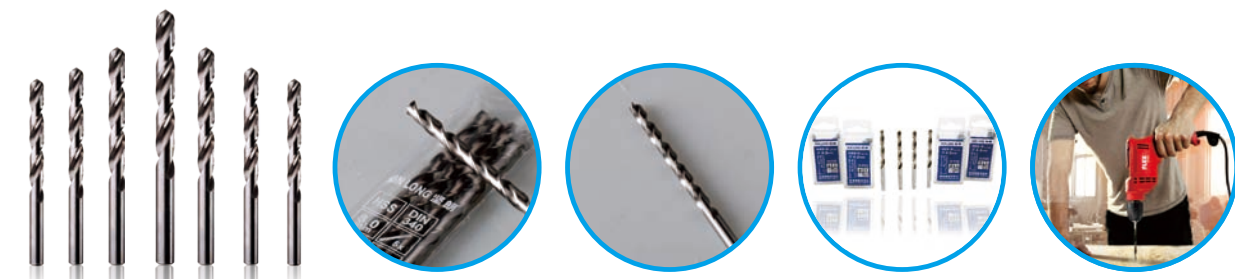

6542 material, hardness: 63°~65°

Workpiece thickness: 1.4~1.8mm, machine speed 6000 ~ 8000 rpm

Applicable to semi-automatic machine tools

Bit series Smooth surface, smooth chip removal, accurate size, long service life and wide application range

Bit selection

Material	6542		4341	
Technology	MZ	ZZ	MZ	ZZ
Rockwell hardness /HRC	64~66	64~66	62~63	62~63
Application	For processing plastic steel, steel lining, stainless steel plate, all kinds of wood, iron, copper and aluminum alloy.		Used to process all kinds of wood, iron, copper and aluminum alloy.

Screwdriver set head series

Tough screwdriver set head, super strong magnet, adhere to screws, not easy to fall off
Screwdriver set head handle type: 1/4 "hexagon handle
Head type: cross PH2

Screwdriver set head selection

Material	A8		Taiwan S2	
Hardness	High		Rising-falling	
Head shape	Round		hexagonal	
Head size	Big	Small	Big	Small
Application scenario	Round head screw	Countersunk head screw	Round head screw	Countersunk head screw

Small hand electric drill

1. Specially made for the door and window factory/one more carbon brush for free.
2. Compact body, comfortable grip, high quality motor, strong power.
3. Light and efficient, long service life.
4. Elastic screw.
