Kinlong U Groove Door & Window Hardware Product Features:
Safe, Durable, Humanized

U Groove Profile Requirement for Kinlong Door&Window Hardware

Kinlong hardware is applicable to standard european U-groove profile of solid wood/wood-clad aluminium/aluminium-clad wood/PVC/aluminium. the specific requirements are as follows: (Remark: All specification is after surface treatment)

PVC profile specification

Required dimension for sash profile

Required dimension for frame profile

Solid wood profile specification

Required dimension for sash and frame

Required dimension for sash profile

Aluminum-clad wood profile specification

Required dimension for sash and frame

Required dimension for sash profile

Wood-clad aluminum profile specification

Required dimension for sash and frame

Required dimension for sash profile

U-PVC Turn-and-Tilt Widow Hardware Series-SCPX100

Awarded the certificate of german IFT testing agency

The turn-and-tilt window hardware system for U groove PVC window launched by Kinlong, combines the special structure design of ventilation and position locking point,touching structure corner device(transmitter), and three-dimensional adjustable pivot hinges with high load-bearing. High-quality process of high anti-corrosion alloy coating brings different types of customers optimal perform ace ratio and wonderful using experience.

IFT-Rosenheim windows & doors technology research Institution in german, is the top testing and standards development agency in the world, whose products certification and quality supervision certificates are widely accepted in the market and recognized as proof of product quality.

The U groove turn-and-tilt window hardware system of Kinlong, after more than one year of exploration and experiment, based on the foundation of structural design innovation and craft improvement, passes the test of IFT at once and becomes the first domestic one to pass IFT.

The load-bearing curve of pivot hinge

The load-bearing curve of 90kg pivot hinge

Remark: The shaded area needs to add a second control

U-PVC Turn-and-Tilt Widow Hardware Series-SCXP100

Crafted

We provide two plans of corrosion-resistant with standard and high degree for U groove PVC open-in bottom-hung hardware. It adopts high corrosion-resistant alloy coating process and the degree of antirust is over 5 (salt-spray test time is more than 1000 hours). It can be used on U groove pvc window of standard 12/20-9, 12/20-13, the bearing capacity of which can be 130kg,suitable for the sash width 320mm-1000mm, sash height 490mm-1800mm, and it is your perfect companion for high-quality energy-saving widows.

Superior quality

For the windows of multi-point lock,whether the whole window hardware system operation smoothly or not depends on the design of corner device and the smooth of transmitter. the special design of KIN LONG point touching and sliding structure makes the corner device operate smoothly and the opening and closing of the window easily.

Safe and practical

With two ways of error-prevention function, it can prevent the wrong operation among the 3 conditions of open or close, and avoid the use disorder and safety risks. Meanwhile, It is equipped with the concealed safety accessory-safety corner device, which is installed at the upper corner of window and can change the status of locking point to limit the opening, especially to limit operating of children and specific populations, increasing the safety and windows style.

1-1 SCPX100 Series Turn-and-Tilt Window Hardware System

Hardware Configuration for SCPX100 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order
02	Transmitter	PCDQN47509-12	1	132	Depends on window system

Optional Corner Device

Configuration instruction

- Above configuration is applicable to "9" series PVC profile, besides there is"13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from 430mm to 600mm. this system can meet the requirement of the sash groove height 490mm-1800mm and the width 320mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series: the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- If need to increase the safety, then hardware with anti-theft locking point can be selected.
- The above is only for reference. please consult our technical department for sepecific requiement.

1-2 SCPX200 Series Turn-and-Tilt Window Hardware System

Hardware Configuration for SCPX200 Series

13	Side transmission rod	PBCDG004	1	131	
14	Limiter	PFC0900	1	147	

Optional Handle

Optional Corner Device

Optional Limiter

Configuration instruction

- Above configuration is applicable to "9" series PVC profile, besides there is"13" series configuration.
- This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from 520mm to 720mm. This system can meet the requirement of the sash groove height 490mm-1800mm and the width 410mm-720mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
The sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤The maximum load bearing capacity of the pivot hinge.
- If need to increase the safety, then hardware with anti-theft locking point can be selected.
- In order to ensure the tightness of the system, corner device PZJQ203 must be installed on the hinge side.
- The above is only for reference. please consult our technical department for sepecific requirement.
- Every 5000 times repeatedly open and close the concealed upper hinge and the bottom hinge for lubrication and maintenance, to ensure the normal service life of products.

1-4 SCPX400 Series Fire-Resistant Turn & Tilt Window Hardware System

16	Frame connector	PKLJK02	6	161	
17	Side transmission rod	PBCDGF004	1	---	

Optional Handle

Configuration instruction:

1. This configuration can realize outdoor fire resistance 1h, besides there are other fire-resistant configurations and corresponding fire-resistant time, please consult our technical department for details.
2. Above configuration is applicable to "13 series, besides there is "9" series configuration.
3. This configuration is applicable to sash with height ranged from 901mm-1200mm,width ranged from 430mm 600mm. This configuration also can meet the requirements of sash height ranged from 490mm-1800mm,width ranged from 320mm-1000mm if choose other accessories, but should refer to the parameter, please see the product series of this catalogue for details. The recommended proportion is width:Height=1:1.5.
4. The maximum load bearing capacity of this configuration is 130kg, the load bearing capacity depends on the hinge,Please refer to hinge series; Sash Dead Weight(The Weight of Glass、 Sash Profile and other Accessories X1.4(Safety Factor)≤Maximum Load Bearing Capacity of the Hinge.
5. The above is only for reference. Please consult our technical department for specific requirements.

Optional Handle

Optional Corner Device

Configuration instruction

- Above configuration is applicable to "9" series PVC profile, besides there is "13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from 430mm to 600mm. this system can meet the requirement of the sash groove height 490mm-1800mm and the width 320mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series: the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- If need to increase the safety, then hardware with anti-theft locking point can be selected.
- The above is only for reference. please consult our technical department for sepecific requirment.

Instructions Of Turn-and-Tilt Window and Tilt-and-Turn Window System

Drilling and installation

Instructions

- 1 Pivot hinge-the duplicator PKMQ09/I and PKMQ09/II is required for the pivot hinge screw holes.
All adjustable parts should be located at the initial adjustment position before installing pivot hinge.
- 2 Handle-drilling dimension of open-in handle refers to the center of the transmitter, the transmitter hole should be in a concentric condition with the spindle hole of the handle, the handle should be installed in horizontal position 90°.
- 3 Selecting the stainless steel ST4.2 self-tapping countersunk screws.

Installation of corner device PZJQ006
(The screws should be fixed on the side of profile)

Connecting rod locking block should close to the notches surface

Drilling drawing for upper pivot hinge

Drilling drawing for handle

Drilling drawing for bottom pivot hinge PHYXN002
(Drilling with duplicator PKMQ03A)

Installation of overturn supporter and locking plate

Installation of supporting block and supporting cover

Drilling drawing for bottom pivot hinge

Adjustment and installation

Connecting rod installation / adjustment illustration

Code number	Applicable width	Rod length	Maximum cutting size	Remark
PLGNXR10904-06	430-600	448	170	Applicable to the rod of the same size the X figure is the same
PLGNXR10906-08	601-800	648	200	
PLGNXR10908-10	801-1000	848	200	

■ please refer to Page 183 for cutting profile

The sash sagging can be adjusted, the installation error can be absorbed

The air tightness, water tightness and weather-strip tightness can be adjusted after window locked.

Transmitter installation/adjustment illustration

Transmitter not include anti-misoperation device, anti-misoperation device needs to be ordered seperately and has left and right type.

Misoperation device: PFWQR001

Code number	Applicable width	Rod length	Maximum cutting size	Remark
PCDQN47505-07A	570-730	424	80	Applicable to the rod of the same size the X figure is the same
PCDQN47507-09	690-900	596	105	
PCDQN47509-12	901-1200	896	150	
PCDQN47512-14	1201-1450	1145	122	
PCDQN47512-16	1201-1600	1296	200	

■ please refer to page 183 for cutting profile

Lock point

Adjust the overlap of locking-point and locking plate to improve the air-tightness of window

Misoperation device

Particular screw M4*6

Bottom pivot hinge / adjustment illustration

The 3-D adjustable hinge can improve air tightness、water tightness of door, and the installation error can be eliminated

08	Mid pivot hinge	PHYZ00709	1	98	Divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces

Optional Handle

Configuration instruction

1. Above configuration is applicable to "9" series PVC profile, besides there is"13" series configuration.
2. Items in green are optional.
3. This configuration is applicable to (including the selective items) sash with height ranged from 801mm to 1000mm and width ranged from 450mm to 1000mm. this system can meet the requirement of the sash groove height 270mm-2200mm and the width 450mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
4. The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series: the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
5. If need to increase the safety, then hardware with anti-theft locking point can be selected.
6. The above is only for reference. please consult our technical department for sepecific requirement.

3-2 SCPN300 Series Open-in Window Hardware System

Hardware Configuration for SCPN300

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN013	1	79	Optional
02	Transmitter	PCDQS07508	1	133	Depends on window system

Optional Handle

Configuration instruction

- 1. Above configuration is applicable to "9" series PVC profile, besides there is"13" series configuration.
- 2. The maximum ventilation distance is 35mm for the this configuration (参考 60 系列型材).
- 3. Items in green are optional.
- 4. This configuration is applicable to (including the selective items) sash with height ranged from 801mm to 1000mm and width ranged from 450mm to 1000mm. this system can meet the requirement of the sash groove height 800mm-1400mm and the width 450mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
- 5. The maximum load bearing capacity of this configuration is 130kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- 6. If need to increase the safety, then hardware with anti-theft locking point can be selected.
- 7. The above is only for reference. please consult our technical department for sepecific requiriment.

Instruction of Open-in Window (Safety&Micro-ventilation)

Drilling and installation

Instructions

- 1 Pivot hinge-the duplicator PKMQ09/I and PKMQ09/II is required for pivot hinge screw holes. All adjustable parts should be located at the initial adjustment position before installing pivot hinge.
- 2 Handle-drilling dimension of open-in handle refers to the center of the transmitter, the transmitter hole should be in a concentric condition with the spindle hole of the handle, the handle should be installed in horizontal position 90°.
- 3 Selecting the stainless steel ST4.2 self-tapping countersunk screws.

Safety & Anti-theft Open-in Side-Hung Window Accessories

Operation introduction

3-4 SCPN510 Series Open-in Fire-resistant Window System

Hardware Configuration for SCPN510 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order
02	Transmitter	PCDQFH41509-12	1	136	Depends on window system
03	Corner device	PZJQFD204	2	126	
04	Upper corner hinge	PHYSNR00413	1	100	Left & Right, divided into9、13serie, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
05	Bottom pivot hinge	PHYXNR00913	1	97	Left & Right, divided into9、13serie, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
06	Locking plate	PSK01713A	5	155	Divided into9、13series, depends on the quantity of locking points
07	Lifting block	PTSK001	1	159	
08	Frame connector block	PKLJK02	6	161	
09	Sash connecting block	PSLJK02	10	161	
10	Middle pivot hinge	PHYZ01013	1	99	Divided into9、13series

Optional Handle

Optional Corner Device

Configuration instruction

1. This configuration can achieve outdoor fire resistance for 1 hour, and for other fireproof configurations and corresponding fire resistance time, please consult the company's technical department for details.
2. Items in green are optional.
3. Above configuration is applicable to "13" series PVC profile, besides there is "9" series configuration.
4. This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from 400mm to 1000mm. this system can meet the requirement of the sash groove height 490mm-1800mm and the width 400mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height).(W)1:1.5(H)
5. The maximum load bearing capacity of this configuration is 130kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series: the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
6. The above is only for reference. please consult our technical department for sepecific requiement.

3-5 SCPN520 Series Self-Locking in case of Fire & Fire-resistant Window Hardware System

Hardware Configuration for SCPN520 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order
02	Transmitter	PCDQZB41508	1	134	Depends on window system
03	Locking plate	PSK01709A	2	154	Divided into9、13series, depends on the quantity of locking points
04	Upper corner hinge	PHYSNR0069	1	99	Left & Right, divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
05	Bottom pivot hinge	PHYXNR0069	1	99	Left & Right, divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
06	Temperature - controlled limiting stopper	PFC0700CK18	1	147	
07	Self-locking piece	PSKZBR00109P3	2	156	Left & Right, divided into9、13series
08	Frame connector block	PKLJK02	6	161	
09	Lifting block	PTSK001	1	159	
10	Middle pivot hinge	PHYZ0109	1	99	Divided into9、13series

Optional Handle

Configuration instruction

1. This configuration can realize the function of window sash self-closing (automatic window closing and automatic window locking) in case of fire, which can realize automatic window sash locking in case of fire.
2. This configuration can meet the daily opening and closing requirements, and also can locate frictionally to any angle within 90 degrees.
3. This configuration can realize outdoor fire resistance of 1h. besides there are other fire-resistant configurations and corresponding fire-resistant time, please consult our technical department for details.
4. Above configuration is applicable to "9" series, besides there is "13" series configuration.
5. Items in green are optional.
6. This configuration is applicable to sash with height ranged from 801mm-1000mm,width ranged from 500mm-1000mm. this configuration also can meet the requirements of sash height ranged from 601mm-2200mm,width ranged from 500mm-1000mm if choose other accessories, but should refer to the parameter,please see the product series of this catalogue for details. the recommended proportion is width:Height=1:1.5.
7. The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the hinge, please refer to hinge series; sash dead weight(the weight of glass、sash profile and other accessories)X1.4(safety factor)≤maximum load bearing capacity of hinge.
8. The above is only for reference. please consult our technical department for specific requirements.

Self-closing & self-locking in case of fire.

Thermally sensitive glass ball, self-closing in case of fire.

Self-locking, keep the fire away.

Split design, easy to install.

Arbitrary position.

Instruction for Self-Locking Fire-resistant Hardware system

Step 2: The limiter should be installed at the same line position (as shown in figure 1), and it is attached to the side wall of the drain tank (as shown in figure 2);

Figure 2

Figure 3

Step 3: Connecting the pin of limiter into the pin hole of upper corner hinge(Note: it must be installed in right place).

3-6 SCPN530 Fire-resistant Hardware System

Hardware Configuration for SCPN530 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order
02	Transmitter	PCDQFD47510	1	132	Depends on window system
03	Locking plate	PSK01713A	3	155	Divided into9、13series, depends on the quantity of locking points
04	Upper corner hinge	PHYSNR00413	1	100	Left & Right, divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
05	Bottom pivot hinge	PHYXNR00913	1	97	Left & Right, divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
06	Middle pivot hinge	PHYZ01013	1	99	Divided into9、13series, please indicate the color while placing order
07	Limiter	PFC00112	1	147	Depends on window system
08	Lifting block	PTSK001	1	159	

Optional Handle

Configuration instruction

1. This configuration can realize outdoor fire resistance 0.5h, besides there are other fire-resistant configurations and corresponding fire-resistant time, please consult our technical department for details.
2. Above configuration is applicable to "9" series PVC profile, besides there is "13" series configuration.
3. This configuration is applicable to sash with height ranged from 1001mm-1200mm,width ranged from 450mm-1000mm. this configuration also can meet the requirements of sash height ranged from 260mm-2200mm,width ranged from 450mm-1000mm if choose other accessories, but should refer to the parameter, see the product series of this catalogue for details. the recommended proportion is width:height=1:1.5.
4. The maximum load bearing capacity of this configuration is 130kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series: the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
5. The above is only for reference. please consult our technical department for sepecific requiement.

Instruction of Open-in Fire-resistant Window

Drilling and Installation

Instructions

- 1 Pivot hinge-the duplicator PKMQ09/II is required for pivot hinge screw holes.
All adjustable parts should be located at the initial adjustment position before installing pivot hinge.
- 2 Handle-drilling dimension of open-in handle refers to the center of the transmitter, the transmitter hole should be in a concentric condition with the spindle hole of the handle.
- 3 Selecting the stainless steel ST4.2 self-tapping countersunk screws. the screw to fix the sash connecting block depends on window profile.

The hole-cut position of upper and lower corner device connection block on sash

The hole-cut position of the upper corner hinge fan connection block on sash

The hole-cut position of the middle hinge connection block on sash

The hole-cut position of lower hinge connection block on sash

3-7 SCPN600 Series Open-in Window Hardware System

Hardware Configuration for SCPN600 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order
02	Transmitter	PCDQND47508	1	132	Depends on window system
03	Concealed upper pivot hinge	PYHYSR0039A	1	102	Left & Right, divided into9、13series
04	Concealed bottom pivot hinge	PYHYXR0039A	1	102	Left & Right, divided into9、13series
05	Locking plate	PSK20109	2	153	Divided into9、13series, depends on the quantity of locking points
06	Lifting block	PTSK001	1	159	
07	Limiter piece	PFC0900	1	147	Optional
08	Concealed mid lock	PYZS0039	1	101	Divided into9、13series

Optional Handle

Optional Limiter Piece

Configuration instruction

- Above configuration is applicable to "9" series PVC profile, Besides there is "13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from 801mm to 1000mm and width ranged from350mm to 1000mm. this system can meet the requirement of the sash groove height 270mm-2200mm and the width 350mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. It is recommended to keep the window ratio (width/height). (W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
The sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- If need to increase the safety, then hardware with anti-theft locking point can be selected.
- The above is only for reference. please consult our technical department for sepecific requirement.
- Every 5000 times repeatedly open and close the concealed upper hinge and the bottom hinge for lubrication and maintenance, to ensure the normal service life of products.

4-1 SCDK100 Series Double-leaf Window Hardware System With Fake Mullion

Hardware Configuration for SCDK100 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSN001	1	77	Optional, please indicate the color while placing order

10	Lifting block	PTSK001	2	159	
11	Mid pivot hinge	PHYZ00709	2	98	Divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces

Optional Tower Bolt

Socket PCXGN012-15A	Linking rod PLJGN012-23B

Optional Tower Bolt

Socket PCXGN012

Configuration instruction

- Above configuration is applicable to "9" series PVC profile, besides there is "13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from1001mm to 1200mm and width ranged from 400mm to 1000mm. this system can meet the requirement of the sash groove height 600mm-2200mm and the width 400mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. it is recommended to keep the window ratio (width/height).(W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- The above is only for reference. please consult our technical department for sepecific requierment.

Upper pivot hinge installation instruction

Bottom pivot hinge installation instruction

Drilling tool-duplicator

Application
Open-in window.
H size has 15mm and 17.5mm, special profile can use gasket which thickness is 1mm

Adjustment
Using 4mm Allen Key. horizontal level can be adjusted in +2/-3

Application
Open-in window with 9 series profile and 13 series profile.

H size is 16mm, special profile can use gasket which thickness is 1mm and 2.5mm

Drilling size of handle & transmitter

A	7.5	15	30	35
B	≥21	≥28	≥43	≥48
C	≥65	≥70	≥102	≥102

Application
Please refer to transmitter series in this catalog to select the correct size

Adjustment
Using 4# allen key
Locking point of transmitter is ±1.5mm adjustable

Concealed hinge installation instruction

Install a part of bottom hinge on sash

Install a part of bottom hinge on frame

Install the pull rod at the part of frame

Install a part of upper hinge on frame

key point of installation of PFC001 series casement restrictor

Adjustment
Using 4# allen key /flat-head screwdriver
1. Adjust the screw to loosen the tightness of sliding block to adjust wind pressure resistance and window position

Limiting stopper selection requirement					
Product code	length	Minimum applicable groove width(mm)	slide installation place	Open angle	Applicable hinge series
PFC00108	203	280	A=25	90	Flat hinge, side hinge
PFC00110	254	360	A=60		Flat hinge, side hinge
PFC00112	305	450	A=100		Corner hinges, flat hinge, side hinge
PFC00114	365	530	A=125		Corner hinges, flat hinge, side hinge
PFC00116	365	570	A=145		Invisible hinge (needs to be installed with the sash part) flat-head screwdriver
			A=165		Corner hinges, flat hinge, side hinge

Note: According to the window type specifications, the largest size limiter is preferred

5-1 SCPW100 Series Open-out Window Hardware System

Hardware Configuration for SCPW100 Series

Number	Product Name	Code	QTY	Page	Remark

Configuration instruction

1. The load bearing capacity depends on the friction stay, please refer to friction stay series:
the sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the friction stay.
2. Items in green are optional.
3. To improve the security better, security lock point can be installed.
4. The above is only for reference. please consult our technical department for sepecific requiement.

6-1 SCSW100 Series, Top-Hung Window Hardware System

Hardware Configuration for SCSW100 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PZSW005	1	82	Optional
02	Transmitter	PCDQWD22008	1	139	Depends on window system
03	Friction stay	PHCS010014K18	2	150	Depends on window system
04	Locking plate	PSK20109	2	153	Divided into9、13series, depends on the quantity of locking points
05	Anti-drop piece	1630FJS-16	4	---	
06	Limiter	PFC050010	2	147	Depends on window system

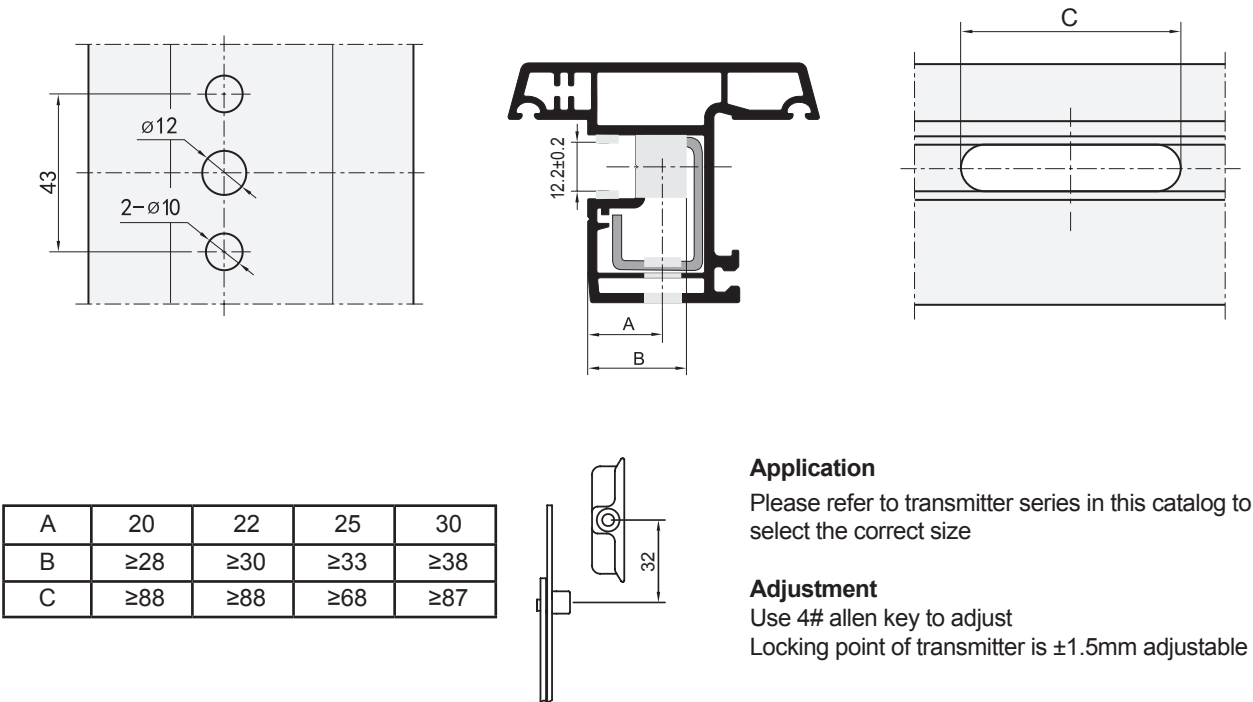

Optional Handle

Handle PZSW002	Handle PZSWR011

Configuration instruction

1. The load bearing capacity depends on the friction stay, please refer to friction stay series:
the sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the friction stay.
2. To improve the security better, security lock point can be installed.
3. The above is only for reference. please consult our technical department for sepecific requiement.

Installation Instruction of Open-out Window System

Selecting the screw according to the actual situation, the counterhole must work with countersunk screw, other holes must work with pan head screw, so that the firmness and reliability of installation can be guaranteed. (Refer to the below photo)

Selection of the self-tapping screws

Countersunk screw

Pan head screw

Selection of the friction stay

1. Safety loading capacity formula of friction stay:
safety loading capacity=total weight (glass+sash part of aluminium profile)*safety factor1.4 \leq max. window weight [please refer to the technical parameters.]
2. Generally, for the side-hung window series, the length of friction stay should be no less than the 2/3 of the width of the window. If the window is light, then it can be 1/2.
when choosing the friction stay for top-hung window series, its length is normally the 1/2 of the height of the window.
3. Suggested proportion of the casement is height: width=1.5 : 1 .

Cleaning

Please keep the surface clean.
Strong corrosive solvents is never allowed.

Lubrication

All the movable and mechanical friction parts of the friction stay should be lubricated with the lubrication oil or other lubricant.

Screw fixing

Please check and fasten the loose screw periodically.

Adjusting

If the window could not work smoothly, or the sealing effect is not good, etc. please kindly consult our engineers before taking the related steps.

7-1 SCTL100 Series Sliding Window Hardware System

Hardware Configuration for SCTL100 Series

Number	Product Name	Code	QTY	Page	Remark
01	Crescent lock	PYSR001/I	1	117	Optional, please indicate the color while placing order.
02	Locking hook	PSG008	1	120	
03	88 Single roller	PDHRC001	4	112	Optional
04	Anti-strike block	PFZK001	4	122	
05	Anti-strike block	PFZK003	1	123	
06	Anti-theft piece	PFDK002	1	122	

Optional roller

Configuration instruction

1. The maximum load bearing capacity of this configuration is 40kg, the load bearing capacity depends on the roller, please refer to roller series:
The sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the roller
2. The above is only for reference. please consult our technical department for sepecific requiement.

7-2 SCTL200 Series Sliding Window Hardware System

Hardware Configuration for SCTL200 Series

Number	Product Name	Code	QTY	Page	Remark
01	Automatic sliding lock	PZDSL002	1	119	Optional (Including PSG001 Lock Hook) Please indicate the color while placing order
02		PZDSR002	1	119

04	Anti-strike block	PFZK001	4	122	
05	Anti-theft piece	PFDK002	1	122	

Optional Roller

Configuration instruction

1. The maximum load bearing capacity of this configuration is 40kg, the load bearing capacity depends on the roller, please refer to roller series:
The sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the roller
2. The above is only for reference. please consult our technical department for sepecific requiriment.

7-3 SMTL300 Series Sliding Door Hardware System

Hardware Configuration for SMTL300 Series

Number	Product Name	Code	QTY	Page	Remark
01	Manual sliding lock	PSDSS007	2	119	Optional, please indicate the color while placing order.
02	Locking plate	PSK008	2	121	Depends on profile depends on the quantity of manual sliding lock
03	12 Adjustable double roller	PTMLC00490K12	4	116	
04	Anti-strike block	PFZK001	4	122	
05	Anti-theft piece	PFDK002	1	122	

Optional Roller

12 Adjustable door roller / roller PTMLC003120K12

Configuration instruction

1. The maximum load bearing capacity of this configuration is 90kg, the load bearing capacity depends on the roller, please refer to roller series: the sash weight(including the weight of glass, sash profile and other accessories) X1.4(safety coefficient)≤the maximum load bearing capacity of the roller
2. The above is only for reference. please consult our technical department for sepecific requiement.

Note: The selection of screws and lock hook for double side manual sliding lock
L(screws length)=profile thickness(select length specifications in 5mm unit, eg. sash profile is 42mm, the screws length suggest to be M5X40)
the lock hook could be PZDS007-SG1 or PZDS007-SG2 according to the profile.

8-1 SMTL400 Series Sliding Door Hardware System

Hardware Configuration for SMTL400 Series

07	Locking Plate	PSK107	4	122	Depends on the quantity of locking points

Optional Roller

12 Adjustable door roller / roller PTMLC003K12

Configuration instruction

1. The maximum load bearing capacity of this configuration is 160kg, the load bearing capacity depends on the roller, please refer to roller series: the sash weight(including the weight of glass, sash profile and other accessories) X1.4(safety coefficient)≤the maximum load bearing capacity of the roller
2. The above is only for reference. please consult our technical department for sepecific requierement.

9、SMTSTL100 Series Lifting and Sliding Door Hardware System

Hardware Configuration for SMTSTL100 Series

Number	Product Name	Code	QTY	Remark
01	Handle	PMZS100	1	Optional, please indicate the color while placing order
02	Front roller	H50A	1	Depends on window system
03	Back roller	H52	1	
04	Connect rod	H52-10	1	
05	Supporting socket	CDG2370-06	1	
06	Supporting block	CDG2370-05	8	
07	Transmitter Lock	CDG2370	1	
08	Anti-strike block	PFZK005	1	
09	Locking plate	SK51	2	
10	Middle roller	H51	1	

Optional Handle —

Handle PMZS102

Optional Handle 二

Handle Z202	Cylinder PSXAB

Configuration instruction

1. Items in green are optional.
2. Perfect combination of hardware, gasket and profile to ensure the performance of air tightness、 anti-dust and sound insulation.
3. Slide smoothly, operate easily.
4. Perfect anti-theft function by using anti-theft piece even if in micro-ventilation position.
5. The maximum load bearing capacity of this configuration is 300kg, and the load bearing capacity depends on the roller, please refer to roller series:
The sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the roller
6. This series can be used widely, such as sunshine-room,balcony, partition door etc.
7. The above is only for reference. please consult our technical department for sepecific requiement.

Installation Instruction of Sliding Door & Window

Height adjustment of roller

Note: It is recommended to install the roller after adjustment

Roller adjustment

Drilling size of handle & transmitter

A	12
B	≥20
C	≥67

Application
Refer to transmitter series in this catalog to select correct transmitter

Adjustment
Use 4#allen key to adjust the tightness of locking point of transmitter ±0.5mm

Installation illustration of anti-strike block

Note: When PZSN023 series is used, the installation size of anti-strike block PFZK005 in the figure should be not less than 190.

Installation illustration of single-point lock

Single-point lock operation requirement		
Product code	Suitable profile	Distance between frame and sash L (mm)
PDDS01A	Window	18
PDDS02	Door	12
PDDS03A	Window	14

Installation illustration of anti-theft piece

Try to install the anti-theft piece PFDK002 in the center of two tracks.

Installation instruction of pop-up handle

Remark: Don't use the knob to slide, which will break it. put the knob back after use

10-1 SMP100 Series Side-Hung Door Hardware System

Hardware Configuration for SMP100 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PMZS001	1	84	Optional, please indicate the color while placing order
02	Transmitter	PMCDQSS23018	1	142	Depends on door system
03	Locking plate	PSK20113	4	153	Divided into9、13series, depends on the quantity of locking points
04	Pivot hinge	PMHY00180	3	106	Optional, please indicate the color while placing order
05	Lifting block	PTSK001	1	159	
06	Cylinder	PSXAB/T	1	146	Optional
07	Cover plate	PMMB001	1	89	Please indicate the color while placing order
08	Transmitter	PMCDQSS33008	1	142	
09	Side transmitter rod	PBCDG006	2	131	Depends on door system

Optional Handle

Configuration instruction

1. The maximum load bearing capacity of this configuration is 80kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight(including the weight of glass, sash profile and other accessories) $\times 1.4$ (safety coefficient) \leq the maximum load bearing capacity of the pivot hinge.5. to better improve the security, security lock point can be installed.
2. Items in green are optional.
- 3.To improve the security better, security lock point can be installed.
4. The above is only for reference. please consult our technical department for sepecific requierment.
Note: (1)Handle spindle length L =sash thickness δ +30(40)mm
(2)M5 fixing screw length L =sash thickness δ +15mm

10-2、SMP200 Series Side-Hung Door Hardware System

Hardware Configuration for SMP200 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PMZS010	1	87	Optional, please indicate the color while placing order
02	Door lock	PMS30 / IA	1	145	Optional
03	Cover plate	PKMB002	1	159	
04	Side transmission rod	PBCDG006	2	131	Depends on door system
05	Locking plate	PSK20113	2	153	Divided into9、13series, depends on the quantity of locking points
06	Pivot hinge	PMHY002150	3	107	Optional, please indicate the color while placing order
07	Lifting block	PTSK001	1	159	
08	Cylinder	PSXAB/T	1	146	Optional

Optional Door Lock

Configuration instruction

1. The maximum load bearing capacity of this configuration is 150kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight(including the weight of glass, sash profile and other accessories)X1.4(safety coefficient)≤the maximum load bearing capacity of the pivot hinge.5. to better improve the security, security lock point can be installed.
2. To improve the security better, security lock point can be installed.
3. The above is only for reference. please consult our technical department for sepecific requiement.
- Note: (1)Handle spindle length L=sash thicknessδ+30(40)mm
(2)M5 fixing screw length L=sash thicknessδ+15mm

10-3、SMP300 Series Side-Hung Door Hardware System

Hardware Configuration for SMP300 Series

Number	Product Name	Code	QTY	Page	Remark
01	Handle	PMZS009	1	86	Optional, please indicate the color while placing order
02	Transmitter	PMCDQS23018	1	142	Depends on door system
03	Locking plate	PSK20113	4	153	Divided into9、13series, depends on the quantity of locking points
04	Lifting block	PTSK001	1	159	
05	Upper pivot hinge	PHYSNR00213	1	97	Left&Right, Divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
06	Mid pivot hinge	PHYZ00813	1	97	Divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces
07	Bottom pivot hinge	PHYXNR00913	1	97	Left&Right, Divided into9、13series, please indicate the color while placing order, standard hardware can be purchased by sets or pieces

Optional Handle

Configuration instruction

1. The maximum load bearing capacity of this configuration is 65kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight(including the weight of glass, sash profile and other accessories) $\times 1.4$ (safety coefficient) \leq the maximum load bearing capacity of the pivot hinge.5. to better improve the security, security lock point can be installed.
- 2.To improve the security better, security lock point can be installed.
3. The above is only for reference. please consult our technical department for sepecific requiriment.
Note: (1)Handle spindle length L =sash thickness δ +30(40)mm
(2)M5 fixing screw length L =sash thickness δ +15mm

10-4、SMP500 Series Smart Lock Side-Hung Door Hardware System

Hardware Configuration for SMP500 Series

Number	Product Name	Code	QTY	Page	Remark
01	Smart lock	PMZSZL001	1	72	Left & Right, please indicator the color while placing order
02	Door lock	PMS35/IAFX	1	144	Optional
03	Cover plate	PKMB002	1	159	
04	Side transmission rod	PBCDG006	2	131	Depends on door system
05	Locking plate	PSK20113	2	153	Divided into9、13series, depends on the quantity of locking points
06	Hinge	PMHY002150	3	107	Optional, please indicator the color while placing order
07	Lifting piece	PTSK001	1	159	

Optional Handle

Door lock PMS35/IA	Door handle PMZS010	Lock cylinder PSXAB/T

Configuration instruction

- Above configuration is applicable to "13 series, besides there is "9" series configuration.
- The maximum load bearing capacity of this configuration is 150kg, the load bearing capacity depends on the hinge,Please refer to hinge series; sash dead weight(the weight of glass、sash profile and other accessories)X1.4 (safety factor)≤maximum load bearing capacity of hinge.
- For improving the better security, security lock point can be selected.
- The above is only for reference. please consult our technical department for specific requirements.

Matching rules for intelligent lock square steel, screw and twist bar:

- the length of the square steel L= the thickness of the sash profile δ+(25~30)mm (take the common multiple of 5, such as profile thickness 42mm, take square steel 70mm);
- M5 screw length L= profile thickness (if it is not a common multiple of 5, use the addition method to take the value, such as profile thickness 42mm, screw 45mm);
- See configuration instructions on page 73 for the length of torsion bar.

Door handle PMZS010 square steel and screw selection rules:

- Length of square steel L= thickness of sash profile δ+(30~40)mm;
- Length of M5 screw L= thickness of sash profile δ+15mm.

Installation Instruction of Side-hung Door Hardware

Drilling size of transmitter with key

Selection of spindle and screws:
(1) The length of square steel $L=C+(30-40)$ MM
(2) Length of M5 screw $L=C+15$ MM

Remarks: A=25,30,35,40,45
◆ This drilling size also can be used for transmitter without key, just don't drill hole for lock cover

Drilling size of door lock

Selection of spindle and screws:
(1) The length of square steel $L=C+(30-40)$ MM
(2) Length of M5 screw $L=C+15$ MM

Remarks: B=30,35
◆ The size in bracket is for PMS9235/II

Installation instruction of hinge

(The sash cantilever is 20mm, and the overlap of sash and frame is 8mm)

(Installation position of long and short screws)

Switch the left & right hinges of the door

Adjusting function of door hinge

Code number	Adjustment (mm)			A	Washer quantity ≤2	Installation tool
	up & down	left & right	front & rear			
PMHY00180	±3	±5	+1/-2	15.5-18.5	PMHY00180-11A	PMKMQ06
PMHY002150	±3	±5	+1/-2	15.5-18.5	PMHY002150-11	PMKMQ07
PMHY006120	±3	±5	±1	16.5-18.5	PMHY006120DP	PMKMQ09

PKMB002 Adjustment instruction

1. Loosen the screws to adjust size ±2mm from left and right.

2. PKMB002 Rotate 180°, can be adjusted to use for 9 series or 13 series profile.

9 arrow points to the door sash direction installation, when the profile is 13 series, 13 arrow points to the door sash direction installation.

Adjustment instruction of door lock

Change the bevel tongue left and right direction

Instruction of Smart Lock Hardware

Instruction of Smart Lock Hardware

Product name: smart lock
Product code: PMZSZL001(Left type)
PMZSZR001(Right type)

Surface finish:

Pearl silver

Nano black

Red bronze

Configuration Instruction:

- (1) spindle, screws, twist strip can be ordered separately or packaged in complete sets;
- (2) spindle PMFG8-L, L=profile thickness + (25-30)mm (take the common multiple of 5, such as 42mm of profile thickness and 70mm of square steel);
- (3) Screws M5*L, L= profile thickness (If the value is not the common multiple of 5, the addition value is adopted, such as 42mm of profile thickness, and 45mm of screw is taken);
- (3) Twist strips: PNT-Lxx (such as PNT-L65) A+20≤xx≤B+12
A: The distance between the center of u groove to the visible face of indoor;
B: Profile thickness;
xx: Specifications of twist strip (standard products have 3 kinds of size, 40、60、130).

Note: If the specifications of the standard product are not within the scope, the twist strip should be customized, the customized length should be the common multiple of 5, when multiple specifications are available at the same time, 65 specifications are preferred.

Installation Instruction of Smart Lock

Please refer to the user manual for smart profile door lock in the package attachment or scan the QR code on the package for the operation instructions.

Instructions

1. In order to ensure that the product performance is stable, pls exactly ensure the use of the matched frame and sash fitting components as shown in the table. not be free to match.
2. Standard color order can be placed with product code no or fitting code no, non-standard colors only with fitting code sr.

Solution for Heary-Duty Bearing Capacity Hardware System

160kg Roller

- ◆ Suitable for UPVC sliding door system;
- ◆ Maximum load bearing capacity is 160kg, suitable for the bigger specifications' sliding door hardware system;
- ◆ Both flat wheel and grooved wheel have adjustable function, suitable for more kinds of profile.

★★ PFC050014	361	355	338	254	45

PFC0700CK18

◆ Temperature - controlled limiting stopper
◆ Suitable for fire-resistant open-in windows
◆ Minimum applicable width 500mm

PFC0900

◆ Suitable for concealed pivot hinge
Meet the minimum window width 350mm

PAQK01

◆ Safety buckle
◆ It is used for open-out side hung window to realize small angle opening of window
◆ The window can be opened at a small angle or a large Angle

Note: For order quantity less than 1000 sets with standard color, the production time symbol ★★ < 7days, ★ < 10days, none > 15days, The actual production time should be evaluated and the instructions above is for reference only.

PHCP0100 Series (K18)

- ◆ Suitable for side-hung window.
- ◆ Main material is high quality stainless steel 304.
- ◆ Different product specifications will cause slightly difference on the structure, the picture is PHCP010014K18.
- ◆ Meet the standard of china"Construction door&window hardware friction stay"JG/T127-2007.
- ◆ Along with the technique improvement, some data will be changed accordingly.
- ◆ There are other products with a stack height of 15.5mm, please consult the technical department of the company for details.

Wooden Window / Composite Window

Wooden window/Composite Hardware series: Suitable for all kinds of windows, surface treatment for visual hardware adopts bronze color with weather resistance. Hardware used in drive or transmission system adopts surface treatment of advanced anticorrosive electroplating. The surface treatment shows high performance of solid Wood and composite profile.

Wooden Window / Composite Window

Wooden Window / Composite Window Configuration

20-1、WCPX100Series, Turn&Tilt system of Solid Wood.....P162-163

20-2、WCPX200 series solid wood/aluminum clad wood concealed open in top hung window hardware systemP164-165

09	Bottom pivot hinge	NHYXNR0029	1	Left & Right, divided into9、13series, please indicate the color while placing order
10	Locking plate	PSK00424	4	Depends on the quantity of locking points
11	Lifting block	WTSK001	1	
12	Rotated lock block	NQZSZ00424	1	
13	Corner device	NPZJQ203	1	
14	Side transmission rod	NPBCDG004	2	

Optional Handle

Configuration instruction

- Above configuration is applicable to "9" series PVC profile , besides there is"13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from430mm to 600mm. this system can meet the requirement of the sash groove height 570mm-1800mm and the width 430mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. it is recommended to keep the window ratio (width/height).(W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 150kg,the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
the sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- The above is only for reference. please consult our technical department for sepecific requiement.
- Every 5000 times of repeated opening and closing lubrication maintenance, to ensure the normal service life of products.

20-2、WCXP200 Series solid wood/aluminum clad wood
concealed turn and tilt Window

Hardware Configuration for WCXP100 Series

Number	Product Name	Code	QTY	Remark
01	Handle	PZSN006	1	Optional, please indicate the color while placing order
02	Transmitter	NCDQN51509-12	1	Depends on window system

11	Lifting block	WTSK001	1	
12	Rotated lock block	NQZSZR00424	1	
13	Corner device	NPZJQ203	1	
14	Side transmission rod	NPBCDG004	2	

Optional Handle

Configuration instruction

- Above configuration is applicable to "9" series PVC profile , besides there is"13" series configuration.
- Items in green are optional.
- This configuration is applicable to (including the selective items) sash with height ranged from 901mm to 1200mm and width ranged from430mm to 600mm. this system can meet the requirement of the sash groove height 570mm-1800mm and the width 430mm-1000mm, according to the parameters of each accessory. for details, please refer to the product series of this catalogue. it is recommended to keep the window ratio (width/height).(W)1:1.5(H)
- The maximum load bearing capacity of this configuration is 150kg, the load bearing capacity depends on the pivot hinge, please refer to pivot hinge series:
The sash weight (including the weight of glass, sash profile and other accessories) X1.4 (safety coefficient) ≤the maximum load bearing capacity of the pivot hinge.
- The above is only for reference. please consult our technical department for sepecific requierment.

Tilt and Turn & Turn and Tilt Window Hardware System Characteristics
Instruction for Wooden Profile/ Aluminum-wooden profile

Drilling and installation

Instruction

- 1. Pivot hinge---drilling holes for bottom hinge frame with the duplicator WKMQ001 for wooden profile, to ensure the accuracy of the hole size , before the bottom hinge installation , ensure that all adjustment points are at the initial position.
- 2. Handle---drilling holes for open-in handle for wooden profile according to the center of the transmitter, square hole is concentric with handle spindle hole, the handle knob will be installed straightly with 90 degree.
- 3. Transmission rod surface with high anti-corrosion coating, corrosion resistance will be more stronger.

Positioning blocks need to be close to the U-groove tightly

Drilling illustration for upper hinge

Drilling depth of upper hinge: 5mm

Handle drilling illustration

Striker for frame
PSK00118A(18mm)
PSK00220 (20mm)
PSK00424(24mm)

Drilling illustration for bottom hinge

Drilling depth of bottom hinge:5mm

The installation location of tilting locking plate and overturn supporter

Adjust and cutting

Wooden profile connecting rod cutting / adjustment illustration

Code	Applicable width	X(Maximum Cutting dimension)	Remarks
NLGNXR10904-06	430-600	170	The same applicable width, the same X
NLGNXR10906-08	601-800	200	
NLGNXR10908-10	801-1000	200	

◆ The cutting mould refer to page 189

Effectively reduce the sash inclining by adjusting screw

Can effectively adjust the air-tightness, water- tightness and the compaction of the frame and sash

Wooden profile transmitter cutting / adjustment illustration

Code	Applicable width	Length of rod	X(Maximum Cutting dimension)	Remarks
NCDQN51507-09	700-900	602	105	
NCDQN51509-12	901-1200	902	150	
NCDQN51512-14	1201-1450	1150	124	
NCDQN51512-16	1201-1600	1302	200	

◆ The cutting mould refer to page 189

Lock point

Adjusting the amount of overlap between locking point and locking plate, improved the performance of the tightness for the entire window

Wooden profile bottom hinge installation / adjustment illustration

3D hinge can improve the air-tightness and water-tightness, greatly reducing the installation errors

20-4、WCPN100 Series Open-in Side Hung Window

Hardware Configuration for WCPN100 Series

Number	Product Name	Code	QTY	Remark
01	Handle	PZSN006	1	Optional, please indicate the color while placing order

Solution for High Quality Solid Wood Products

Higher Strength

Increasing the length of the hinge's part which is in the sash, and add the integral fixing block, to ensure the hardware and the profile connection is strong, also to make the appearance of the product more noble.

Secure Anti-Misoperation

New structure design of anti-misoperation makes the anti-misoperating device is available for both left and right and quick to install, and it can be effectively used with 9mm-14mm installation space to prevent mis-operation.

High Corrosion Resistance & Multi-Functions

The product adopts the surface treatment of electroplated nickel alloy with high corrosion resistance. the experiment of neutral salt spray reached 1000h. diversified lock points, can be selected with conventional, anti-lever, rolling anti-lever type lock points, to meet the demands of more usage requirements.

High load bearing capacity

The load bearing capacity of the hinge can reach 150kg, and L type hinge seat is added transverse screws for connection. by bidirectional connection with frame profile, it can improve the connection strength between hardware and profile and ensure the performance of the whole window connection.

Wooden Window Duplicator

Name of the fitting	Series Code
Duplicator	WKMQ002
This duplicator is suitable for installing pivot hinge: NHYSNR(L)002、NHYXNR(L)0029/13、NHYZ0029/13	

The Cutting Mould

Cutting mould
PCDM001

Name of the fitting	Series Code
Duplicator	PCDM001
Used for cutting transmitter、connecting rod、linking rod materail.
