Stainless Steel Sheet Metal Product Catalogue

Stainless Steel Sheet Metal Products Application Instructions

Product material and understanding

The main body of sheet metal products is made of stainless steel. Stainless steel material has good resistance to atmospheric oxidation, but also has the ability of corrosion resistance in the medium such as acid, alkali, salt, but this does not mean that stainless steel products will not rust. In addition to its own chemical composition, the corrosion resistance of stainless steel is also effected by changes in operating conditions and environmental media. When the surface of stainless steel is contaminated with corrosive substances or liquids, or in a humid and normal environment, the air contains a large amount of salt, or construction waste and stains are attached to the product during installation and use, resulting in the destruction of the extremely thin, firm, fine and stable chromium-rich oxide film (protective film) on the surface of stainless steel, which will rust.

Customize product requirements

If customers have other requirements for standard products, please contact the sales team. Customers can provide product drawings, size specifications, material requirements and other relevant information, our company can provide product renderings and related information description according to the requirements.

Daily maintenance and instructions for use

- 1.If customers have other requirements for standard products, please contact the sales team. Customers can provide product drawings, size specifications, material requirements and other relevant information, our company can provide product renderings and related information description according to the requirements.
- a. Avoid dust and liquid attached to the products when cleaning, and clean them in time if there are attachments on the product surface;
- b. Wipe and clean with a soft cloth that is not easy to fall off the lint.The brushed surface should be wiped along the grain to avoid creating a pattern.
2. Avoid using rough and sharp objects during daily maintenance to prevent the product from being scratched and affecting its appearance.or even damage the stainless steel surface dense oxide film, resulting in corrosion.
3. When there are slight spots of rust on the surface of the product, it can be wiped with neutral cleaning agent or soapy water.
4. It can be thoroughly cleaned regularly according to the actual use and cleaned with neutral cleaning agent.

storage instructions

1. The product should be stored in a dry, ventilated environment, should avoid exposure to the sun, rain and places prone to impact by objects, try to avoid the product in the corrosive medium erosion environment for a long time. When the product characteristics need to be in the construction scene, it is recommended to timely clean up the construction waste and stains on the surface of the product after the construction is completed.

◆ Attentions:

1. Product images may differ slightly from the actual product due to photographic reasons.
2. We will not be responsible for the quality of applications that exceed the usage limit or the mixed use of other products that are not promised and approved.
3. The Company reserves the right to update products and improve product application technology.

Sheet Metal Decoration

Decorative sheet metal parts are used in the field of rail transit and indoor fine decoration. They are processed and customized from stainless steel plates, with various shapes, including lines and unit plates.

- Material: 304/316L
- Surface treatment: hairline/wild grain /mirror/sandblasting/electroplating/anti-fingerprint
- The expansion width of sheet metal cannot exceed 1500mm, and the length cannot exceed 3000mm.
- The product can be customized according to project requirements
