COMPANY PROFILE

KIN LONG Company is established in 2003 and engaged in research, development, manufacture, and marketing of fittings for architectural hardware. KIN LONG supplies fittings of high quality and provides consulting services to the architectural industry. Through many years' development, KIN LONG achieves a good reputation in construction industry and IPO on the SME board of Shen Zhen Stock Exchange successfully, KIN LONG has become the largest listed company in the construction hardware industry. Stock Abbr. "KIN LONG HARDWARE" Stock code "002791".

KIN LONG has the factory over 700,000sq.m. construction area, employees is exceeding 14,000 and 50+ subsidiaries at present. With developing of 600 sales point in China and oversea, its products have distributed through China and exported to more than 100 countries and areas.

KIN LONG focuses on the development direction of integrated supply of building accessories, meets customer needs with multiple categories of products, and has formed a one-stop service system. "Only professionalism can create unique value, and speculation has no future", this motto runs through all levels of KIN LONG employees.

In addition to adopting advance production technology, KIN LONG also has the expert and designer team for product research, development and innovation to ensure our products are always at the leading level. KIN LONG has more than 20,000 products and over 1,000 domestic and foreign patents. The products provided by KIN LONG have established a good market reputation with advanced design concepts, exquisite appearance and excellent quality. It provides products and services for many famous buildings around the world. The landmark buildings of countless cities have become the pride and glory of KIN LONG people. KIN LONG is always a responsible and trustworthy partner in supplying fittings for architectural hardware.

Guangdong Kinlong GTI Mechatronic Window Control System Company Limited (in the following abbreviated "Kinlong GTI" is a joint venture company of GTI (Hong Kong Automation Group and Guangdong KIN LONG Hardware Products Company Limited and have the ability of research and development, production and marketing of automatic window & door system. Kinlong GTI has established system of R&D, product testing and quality control units. Core material and components are purchased from renowned supplier and/or imported from oversea reputable suppliers. All incoming material and components must pass the quality verification process. Kinlong GTI has two production facilities in Mainland China and Hong Kong. Kinlong GTI offers an extensive range of products including intelligent window control system, electrical window actuator, pneumatic window actuator, manual window actuator and sun- shading system.

Kinlong GTI has passed the UKAS ISO9001:2008 system certification in 2008. By continuously improving our technology and standard, the products' quality has reached international level and obtained international qualifications. Kinlong GTI has been certified by many international standard institutions. Certificates and qualifications are as follow:

CE Certificate; Certificate from the BS EN12101-2:2003 Annex G Smoke and Heat Control Systems; ISO9001:2015 Certificate from UKAS Quality Management System Certification (mutual recognized by HOKLAS; Certificate for Fire Product Certification; Certified by China National Supervision and Test Center for Fire Electronic Product Quality; Certified and accredited by CNAS(China National Accreditation Service for Conformity Assessment; Certified by CMA (China Metrology Accreditation; Approved and certified according to Product Quality Law of the People's Republic of China; Certified by China National Center for Quality Supervision and Test of Fixed Fire-fighting System and Fire-resisting Building Components.

Integrated with business platform of KIN LONG group, GTI products can fully utilize its high quality and advanced technology to provide the best window automation solution to customers. "Only professionalism can create unique value, and speculation has no future". Kinlong GTI believes that its quality products synergy with strong sales network systems is the success key to enlarge market share, not only provide updated technology product, better performance but also better services to serve our old and new customers in future.

PNEUMATIC SMOKE VENTILATION SYSTEM

■ Pneumatic Smoke Ventilation System

Pneumatic Smoke Ventilation System

Pneumatic Smoke Ventilation System PAS-H Cylinder

The pneumatic smoke ventilation system is favored by many users as a new type of environmentally friendly and energy-saving smoke exhaust equipment.

The pneumatic ventilation system is a method of releasing and inhaling compressed air to achieve the purpose of opening and closing windows. It can be controlled by the intelligent control system to control the solenoid valve, or by manually operating the valve.

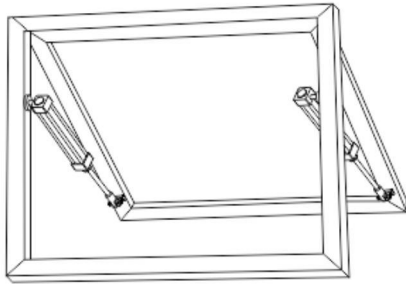

The pneumatic ventilation system has simple in structure, and part of it can be hidden in the window frame. Advantage of system is: large opening angle, durable in using, maintenance simple and convenient, as well as low cost. In addition, the pneumatic ventilation system can better withstand the test of harsh environments, so its service life is also longer. Since the pneumatic ventilation system relies on copper pipes to transmit compressed air to drive the window open, even in the harsh situation of power outage during a fire, the window can be opened and smoke can be exhausted.

Pneumatic ventilation system is wide range to used in different places like public activity venues, large building complex. It can be widely used in top-hung windows, bottom-hung windows, skylights, etc.

Installation on Bottom Hung Window

Pneumatic Smoke Ventilation System

Intelligent Pneumatic Control Circuit Diagram

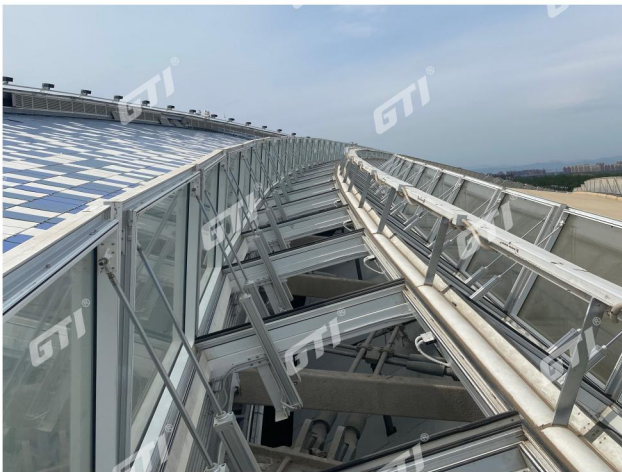

Characteristic of Pneumatic Ventilation System

- Use of air-compressor piston cylinder as to drive the operation, strong power in movement;
- Clean energy, energy saving and environmental protection;
- Can be connected to intelligent smoke exhaust control system and controlled by central controller;
- Optional for pressurized bottle can be connected to the cylinder for assurance of windows operation in case of high temperature detection device being triggered by fire hazard.

 - Specification
-

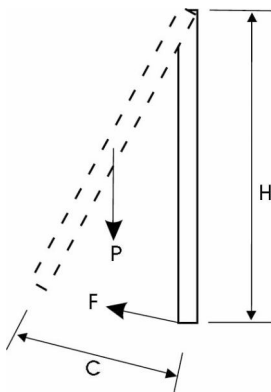

A Quick Guide to Select the Proper Actuator

As the rules for the provision of smoke ventilation systems vary among different countries, the calculation and formula listed below are just for reference in choosing actuator only. Project manager should contact the local, district or state fire protection authority for the necessary

There are two types of actuators basically :

1. Chain actuators that is for top, side and bottom hung windows application.
2. Spindle & Rack actuator that is targeted for domes, roof, skylight, louver, tilting or very heavy top or bottom hung windows application.

Determine the force required to open various types of windows:

Force required to open vertical windows
(Top or bottom hinged windows):

$$F = P/2 \times C/H$$

F = Force (N) required to open the window
 P = Window force (N)
 C = Open distance (m) of the window

Window force (N) = Window weight (kg) \times 9.8 (N)

$$F = P/2$$

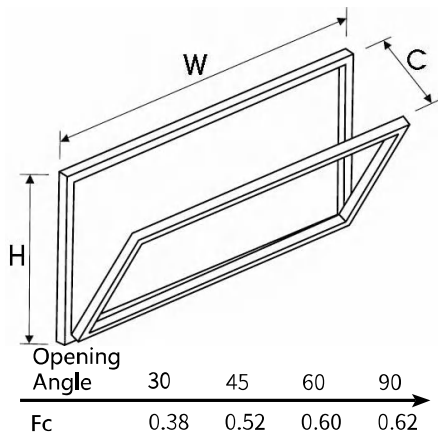

Force required to open horizontal windows
(Top or bottom hinged windows):

F = Force (N) required to open the window

The above formula does not take into account the live load factors such as wind load, rain load, snow load, etc. Due to the large variation of these factors, there is still no fire smoke exhaust system guide that is applicable to all regions. Therefore, engineers should refer to representative installation guide recommendations such as the British BS EN12102-2.

The engineer should also calculate the smoke exhaust area and airflow dynamic area required for each fire smoke exhaust system. When the calculated area is larger than the actual window sash area, the actual window sash area should be used for calculation. The following is the required calculation formula.

A Quick Guide to Select the Proper Actuator

$$\text{Geometric Area(m}^2\text{)} = W \times H \times FC$$

W= Width (m)

H= Height (m)

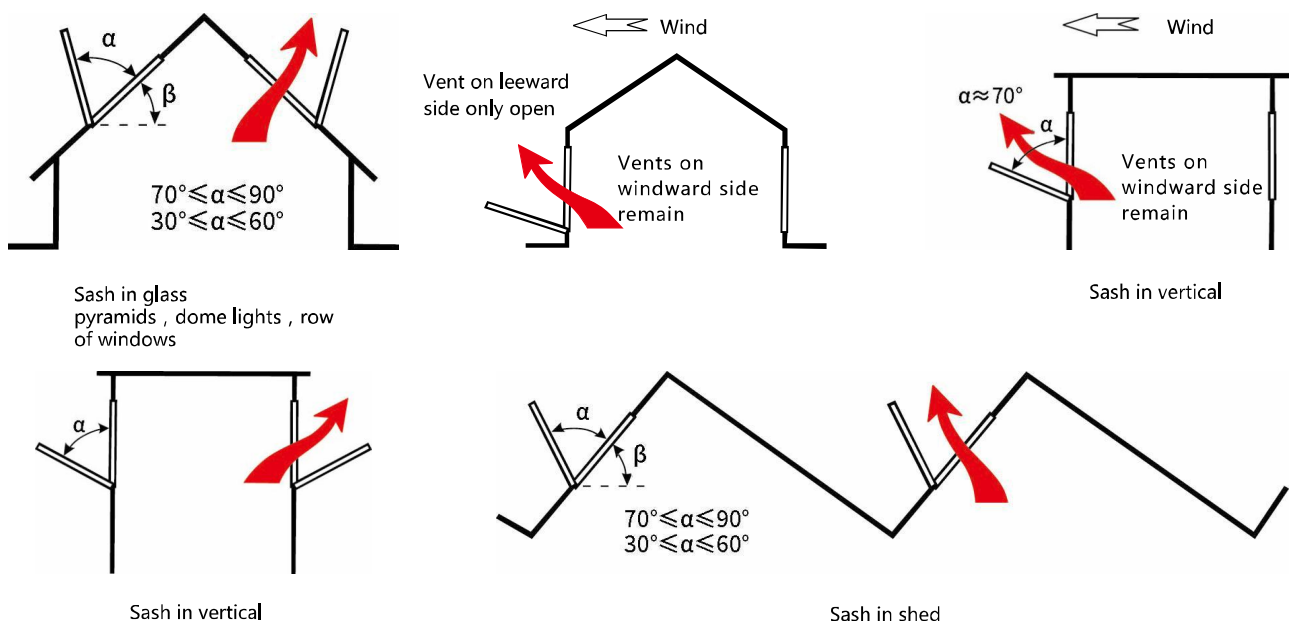

FC= Flow co-efficient

* Calculated area must not over the window

The calculation of smoke exhaust area shall be in accordance with GB 51251-2017 "Technical Standard for Smoke Exhaust System in Buildings":

1. When window with an opening angle greater than 70° is used, its area shall be calculated according to the area of the window; when the window angle is less than 70°, its area shall be calculated according to the vertical projection area when the window is opened to the maximum;
2. When window with an opening angle greater than 70° is used, its area shall be calculated according to the area of the window; when the window angle is less than 70°, its area shall be calculated according to the vertical projection area when the window is opened to the maximum;
3. When a sliding window is used, its area shall be calculated according to the maximum window area opened;
4. When a louver is used, its area shall be calculated according to the effective opening area of the window;
5. When a side hung window is set at the top, its area can be calculated according to the product of 1/2 of the circumference of the window and the sliding distance, and should not be greater than the window area;
6. When a side hung window is set at an external, its area can be calculated according to 1/4 of the window. It is calculated by multiplying the perimeter by the horizontal push distance and should not be larger than the window area.

The following common practice of opening angle recommendation should also be considered:

* If you have any inquiry, please consult with our technical consultant for the specific ventilation solution.

G2-MH Electric Chain Actuator (Apply in Single or Synchronous)

Specification	Unit	Technical Data
Voltage	V	24V DC ± 10%
Push / Pull Force	N	250
Max. current absorption	A	0.7
Stroke	mm	300 / 500
Speed	mm/sec	6
Working Temperature	°C	-15 ~ +75
Protection Class	IP	32

G2-CH Electric Chain Actuator (For Singel use only)

Specification	Unit	Technical Data
Voltage	V	24V DC ± 10%
Push / Pull Force	N	250
Max. current absorption	A	0.7
Stroke	mm	300 / 500
Speed	mm/sec	6
Working Temperature	°C	-15 ~ +75
Protection Class	IP	32

Specification

G5-CH Electric Single Chain Actuator (For Single use only)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	300 / 400
Max. current absorption	A	1.2 / 1.5
Stroke	mm	200 ~ 800
Speed	mm/sec	11
Working Temperature	$^{\circ}$ C	-15 ~ +75
Protection Class	IP	32

G5-MH Electric Chain Actuator (Apply in Single or Synchronous)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	300 / 400
Max. current absorption	A	1.2 / 1.5
Stroke	mm	200 ~ 800
Speed	mm/sec	11
Working Temperature	$^{\circ}$ C	-15 ~ +75
Protection Class	IP	32

G5-CLH Electric Single Chain Actuator (For Single use only)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	500 / 600 / 700
Max. current absorption	A	1.6/ 1.7/ 2
Stroke	mm	200 ~ 800
Speed	mm/sec	12
Working Temperature	$^{\circ}$ C	-15 ~ +75
Protection Class	IP	32

G5-MLH Electric Chain Actuator (Apply in Single or Synchronous)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	500 / 600 / 700
Max. current absorption	A	1.6/ 1.7/ 2
Stroke	mm	200 ~ 800
Speed	mm/sec	12
Working Temperature	$^{\circ}$ C	-15 ~ +75
Protection Class	IP	32

■ G5-CTH Electric Dual Chain Actuator

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	400 / 600/ 800
Max. current absorption	A	2.0 / 2.4/ 3.0
Stroke	mm	100 ~ 1500
Speed	mm/sec	11
Working Temperature	°C	-15 ~ +75
Protection Class	IP	32

■ K10-CH Electric Spindle Actuator (For Single use only)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	1000
Max. current absorption	A	1
Stroke	mm	200 ~ 800
Speed	mm/sec	5.8
Working Temperature	°C	-15 ~ +75
Protection Class	IP	65

■ K10-MH Electric Spindle Actuator (Apply in Single or Synchronous)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	1000
Max. current absorption	A	1
Stroke	mm	200 ~ 800
Speed	mm/sec	5.8
Working Temperature	°C	-15 ~ +75
Protection Class	IP	65

■ K10-CLH Electric Spindle Actuator (For Single use only)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Forc	N	1500
Max. current absorption	A	2.5
Stroke	mm	150 ~ 1000
Speed	mm/sec	10
Working Temperature	°C	-15 ~ +75
Protection Class	IP	65

Specification

K10-MLH Electric Spindle Actuator (Apply in Single or Synchronous)

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Push / Pull Force	N	1500
Max. current absorption	A	2.5
Stroke	mm	150 ~ 1000
Speed	mm/sec	10
Working Temperature	$^{\circ}$ C	-15 ~ +75
Protection Class	IP	65

T1-YC-AH Electric Built-in Window Control System

Specification	Unit	Technical Data
Voltage	V	24V DC \pm 10%
Torque	N.m	10
Max.Window Weight	KG	30
Window Wide Range	mm	500~700
Window Height Range	mm	500~1100
Angle	$^{\circ}$	\leq 90
Speed	$^{\circ}$ /s	12
Working Temperature	$^{\circ}$ C	-20 ~ +50
Protection Class	IP	32

TML-H Multi-Point Lock Actuator

Specification	Unit	Technical Data
Power Supply	V	24V DC \pm 10%
Stroke	mm	32
Push / Pull Force	N	200
Speed	mm/s	4.8
Max. current absorption	A	0.7

TML-300H Multi-Point Lock Actuator

Specification	Unit	Technical Data
Power Supply	V	24V DC \pm 10%
Stroke	mm	35
Push / Pull Force	N	600
Speed	mm/s	4.8
Max. current absorption	A	1.2

WD-AMS-2H Manual Crank-Handle Actuator Dimension & Specification

Specification	Unit	Technical Data
Overall weight	KG	0.5
Product Stroke	mm	200/250/300
Max. Push Force	N	100
Pulley connection method	Pulley with sash profile guide rail (Standard)	
Selective Option	Europe or Chinese Style	

GH-390LH Crank Handle

Specification	Unit	Technical Data
